CSS: Inheritance

nth-child
CSS Inheritance

- If you have 2 entries in your CSS:
  ```css
div {}
div.class {}
```
- BOTH are applied to `<div class="class">`
- Taking advantage: “all my divs will have a border”
- Problems: widths can conflict and rules aren’t obvious
nth-child

- **w3schools**
  - Options:
    - Number
    - Even-odd
    - Formula
      - Every 3rd would be $3n+0$
      - 4, 7, 11 would be $3n+1$

- **nth-last-child** counts from end
