Finding “the Last”
Why is String Manipulation hard?

- Lots of little steps
- Nested functions are confusing
- Use intermediate columns
- Or even complete extra worksheets
Finding the LAST Word

- Find the last blank
  - Find the number of blanks
    - Remove all blanks
    - Difference of the length of the string with blanks and without blanks = number of blanks
  - Change the last blank to a known character
  - Find the character
- Take the RIGHT characters from there
