Excel Conditional Functions

SUMIF
SUMIF(S) and AVERAGEIF(S)

- Bit more complex because they allow you to check one range for criteria and sum or average another
SUMIF in Excel

- **SUMIF (range, criteria, sum_range)**
- This function will add things up, depending on the criteria given.
- **range** – a range of cells
- **criteria** – the criteria we’re checking the range against
  - Same rules as COUNTIF
- **sum_range** – the range of cells to add up
  - can be same or different
Odd Even

- Note that can not use function directly

Fruits and Veggies

- How much would it cost to buy one of every kind of vegetable?
- How much would it cost to buy one of every kind of fruit?
