Tables: Borders
Table borders

- Every element in the table has a border
- Adjacent cells can have their own borders (default) or they can share a border (border-collapse)
Need to format each part

```
table {
    font-weight: bold;
    border: 1px solid black;
    width: 100%;
}
td {
    padding: 5px;
}
```

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>background-color</td>
<td>hex, rgb, name</td>
</tr>
<tr>
<td>border</td>
<td>thickness, style, color</td>
</tr>
<tr>
<td>color</td>
<td>(text color) hex, rgb, name</td>
</tr>
<tr>
<td>height</td>
<td>pixel value or percentage</td>
</tr>
<tr>
<td>width</td>
<td>pixel value or percentage</td>
</tr>
<tr>
<td>padding</td>
<td>pixel value or percentage</td>
</tr>
</tbody>
</table>
Formatting elements

- Often need to repeat format on multiple elements
- CSS notation

```css
th, tr, td {
    border: none;
}
```
