Box Model
Box Model

Allows us to place borders, and space elements in relation to other elements

Here’s where Inspect Element starts being important!
Box Model

- **Margin** – clears an area around the border. Does not have a background color – it is transparent.
- **Border** – a border that goes around the padding and content. Affected by the background color of the box.
- **Padding** – clears an area around the content. Affected by background color of the box.
- **Content** – the content of the box, where text appears.
A cool new feature

- Rounded corners on boxes
- border-radius: 15px;
- New with the latest version of CSS
- If not supported by a browser, you get square corners!
