

# Building the Infinite Brain

---

COMP 690 (193)

Raghavendra Pradyumna Pothukuchi

THE UNIVERSITY  
of NORTH CAROLINA  
at CHAPEL HILL

✉ [raghav@cs.unc.edu](mailto:raghav@cs.unc.edu)

---

## What are BCIs?

Broadly, systems that read, process, and modulate neural activity in the brain

## Types of BCIs

Many, both invasive/implanted and wearable

## What are BCIs used for?

Understanding brain function, treat dysfunction, restore lost function, and augment cognition

Intimately tied to an individual's identity

## What are the computational challenges in designing BCIs?

Growing sensor data needs to be processed on the device

Computers today are limited in achieving both efficiency and flexibility, under safety constraints

# General Suggestions

---

## Take notes

No need to repeat what's in the slides, but note connections, insights

## Write down ideas and follow-ups

Even if you don't plan to revisit them (for now)

## When reading, go down (good) rabbit holes

Trails of papers—builds background knowledge, but don't lose sight of the overall goal: Tree traversal!

## Learn to refine your thoughts into formal and precise summaries, ideas

Even if you don't plan to revisit them (for now)

*“Writing is nature’s way of letting you know how sloppy your thinking is. Math is nature’s way of letting you know how sloppy your writing is.”* Leslie Lamport

# Writing a Paper Review

---

## The Task of the Referee

<http://www2.eecs.berkeley.edu/Pubs/TechRpts/1989/CSD-89-511.pdf>

Alan Smith, *Emeritus, UC Berkeley*

Summarize the paper

What did you learn?

What are the novel contributions of the paper?

Positives, strengths etc.

Negatives, limitations

Summary and review of assumptions, methods, results (check correctness too!)

Significance and Impact (past, present or future)

## **During paper presentations**

1-2 questions for discussion!

Connect the paper to the themes of the course and other papers

# Writing the Project Proposal

The Heilmeier Catechism

<https://www.darpa.mil/about/heilmeier-catechism>

George H. Heilmeier, *former DARPA director*

2-page proposals due 1/21

***Goal:*** What are you trying to do?

***State of the art and challenges/limitations:*** How is it done today, and what are the limits of current practice?

***Novelty and realizability:*** What is new in your approach, and why do you think it will be successful?

***Significance and impact:*** Who cares? If you are successful, what difference will it make?

***Executional challenges:*** What are the risks?

***Effort:*** How much will it cost?

***Timeline:*** How long will it take?

***Metrics and deliverables:*** What are the midterm and final “exams” to check for success?

# More on The Project

---

## Working project

### Examples

- An FPGA/microcontroller implementation of FFT and analysis of power and performance
  - Software to improve/maintain a BCI tool or other software
    - BRAND: <https://github.com/brandbci/brand>
    - Foresee: <https://github.com/bci-foresee/foresee>
  - Verification (or Correctness) specification and analysis of a BCI hardware or software kernel
  - An EEG BCI game of Pong
  - An analysis of algorithms used for seizure detection and their suitability for on-device execution
  - A compiler to translate a BCI application to fit microcontrollers
  - Python to Verilog translation for DWT in BCI processor design
  - Extension of a BCI processing architecture
  - Evaluation of a machine learning algorithm for speech decoding and suggested re-design for on-device execution
  - Leveraging neuroscientific markers for efficient movement intent decoding on device
  - An analysis of cursor movement methods identifying key computational techniques and bottlenecks
- ... (last semester project abstracts will be uploaded for reference)*

**You should argue for why your design (hardware, software) is good**

**You can search online for inspiration, but do not use someone else's code or work—recall the honor code**

# For Today

---

- Quick review
- **Introductions**
- **What is computer architecture?**
- **How are computer architectures analyzed and compared?**

# Introductions!

---

**Name**

**Grad/undergrad**

**Focus area**

**Why are you taking the course?**

# Example Application

## Restoring function

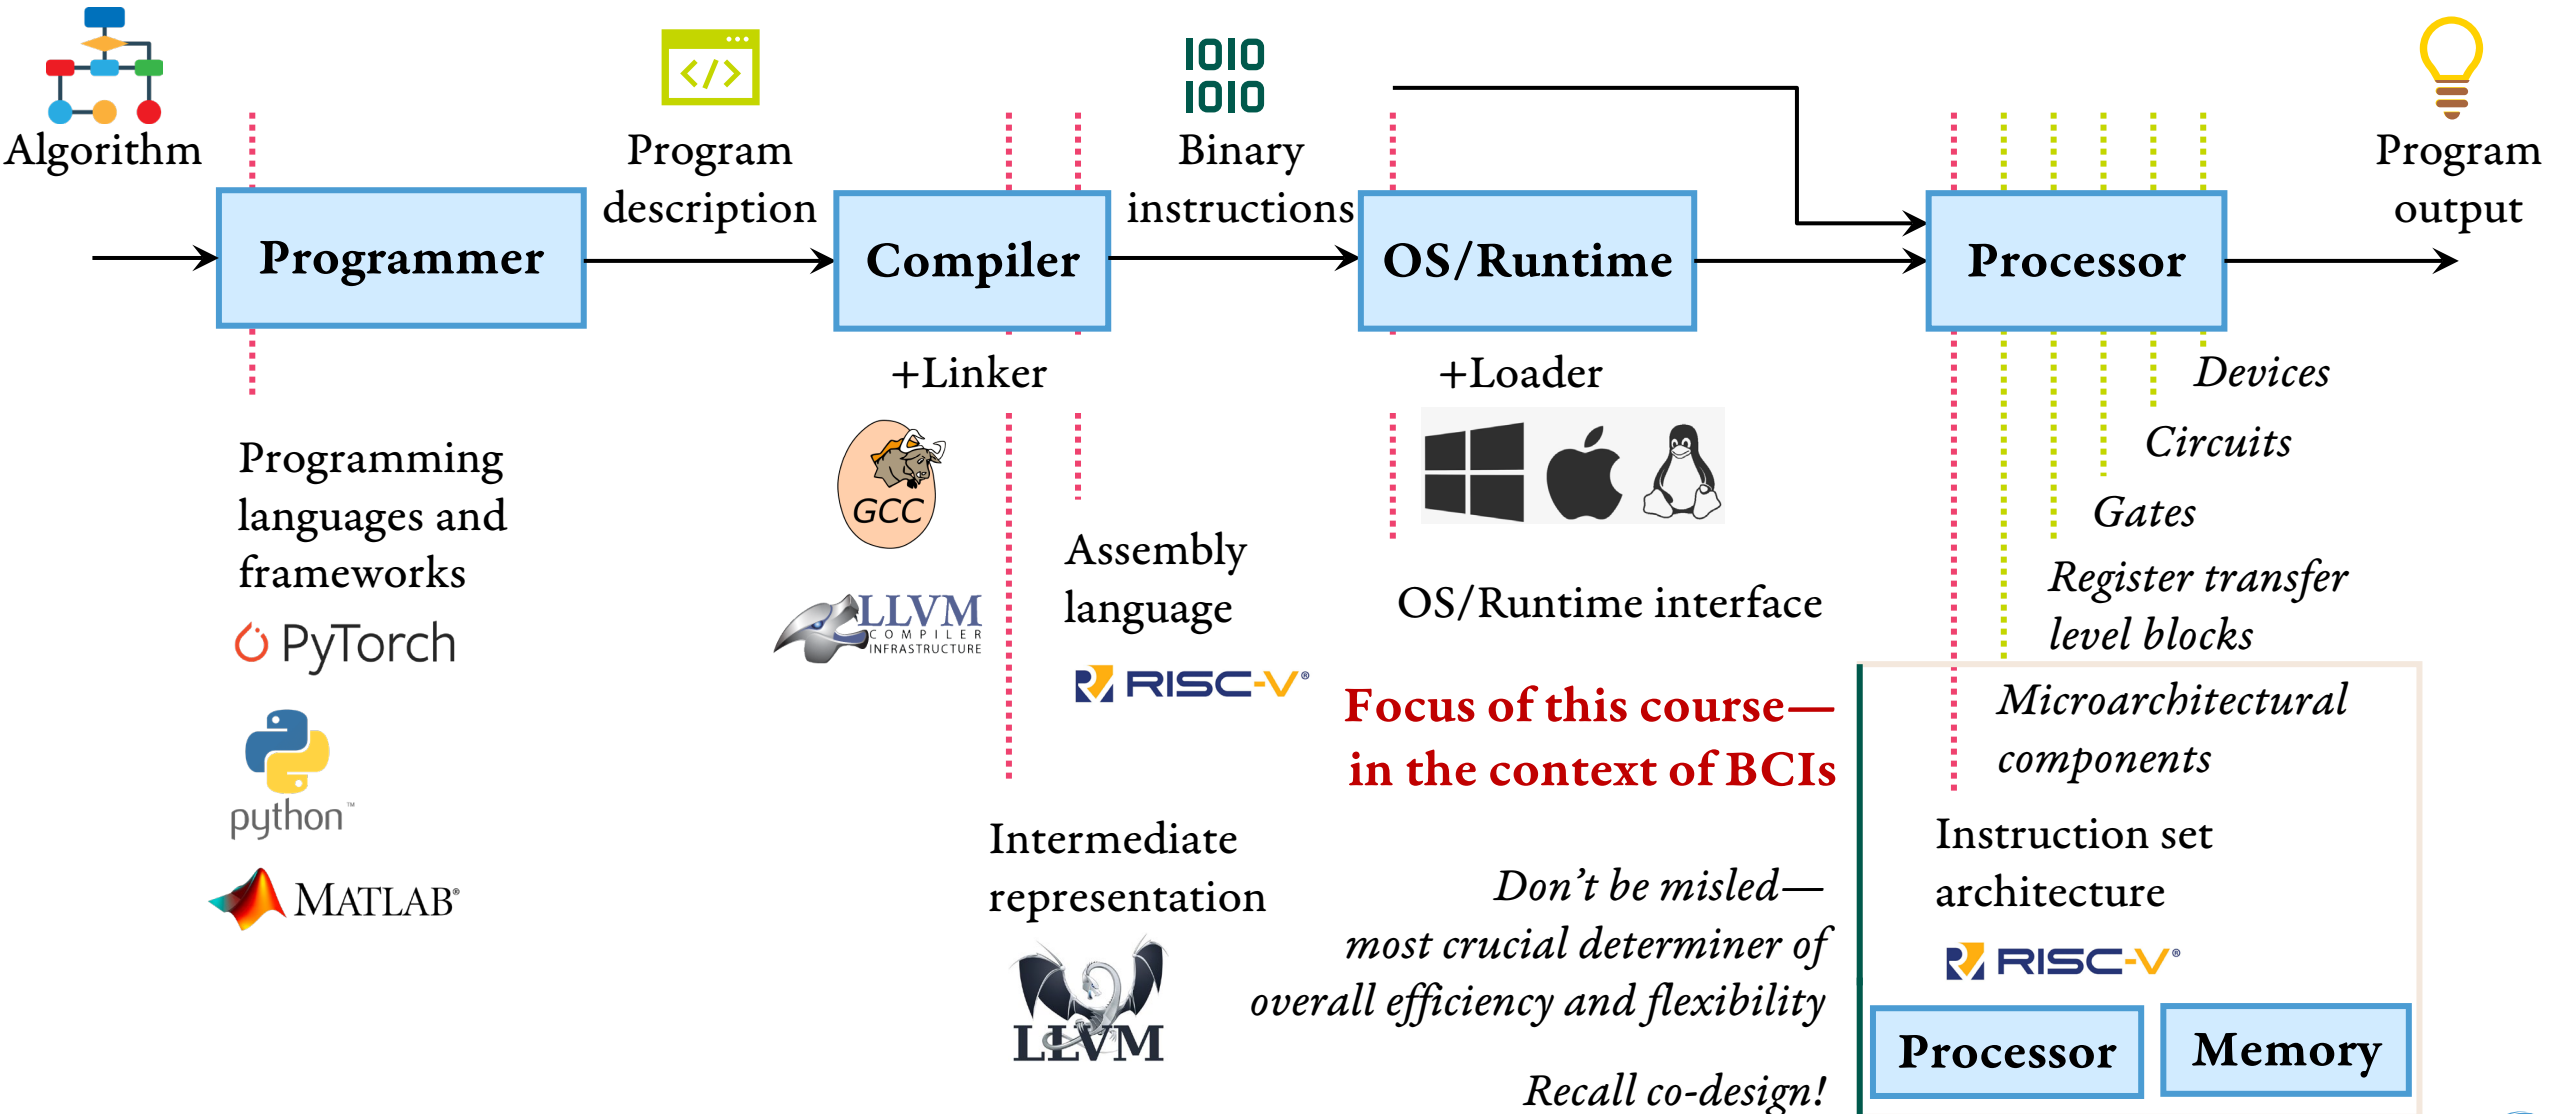

Computational cognitive frameworks

## Mitigating seizures

# BCI Computing is a Full Stack Problem

# What is Computer Architecture?

---

## Previously, it meant the ISA

Most are register based (operands and results in registers), other variants include stack, accumulator

## Now, it could mean everything between the OS and circuit design!

Distinctions are made based on the context

## What we discuss is also called computer organization

Gerrit A. Blaauw

Gene Amdahl

Fred Brooks Jr

“The term architecture is used here to describe the attributes of a system as seen by the programmer, i.e., the conceptual structure and functional behavior, as distinct from the organization of the data flow and controls, the logical design, and the physical implementation.”

*Architecture of the IBM System/360, Apr 1964*

# Goals of A Computer Architect

Reading task: “Hints and Principles for Computer System Design (2021)”  
<https://arxiv.org/abs/2011.02455>

## STEADY by AID with ART

Butler Lampson, *Pioneer in computer system design*

Applicable for BCI computers too!

<b>Simple</b>	<b>Timely</b>	<b>Efficient</b>	<b>Adaptable</b>	<b>Dependable</b>	<b>Yummy</b>	Goals
Is it clean?	Is it ready?	Is it fast?	Can it evolve?	Does it work?	Will it sell?	

<b>Approximate</b>	<b>Incremental</b>	<b>Divide and conquer</b>	Techniques
Speculate, compress...	Independent, iterate...	Abstractions, concurrent...	

<b>Architecture</b>	<b>Automate</b>	<b>Review</b>	<b>Techniques</b>	<b>Test</b>	Process
---------------------	-----------------	---------------	-------------------	-------------	---------

What?	<b>Goals</b>	STEADY	— Simple, Timely, Efficient, Adaptable, Dependable, Yummy
How?	<b>Techniques</b>	by AID	— Approximate, Incremental, Divide & Conquer
When, who?	<b>Process</b>	with ART	— Architecture, Automate, Review, Techniques, Test
